ID: 20101149

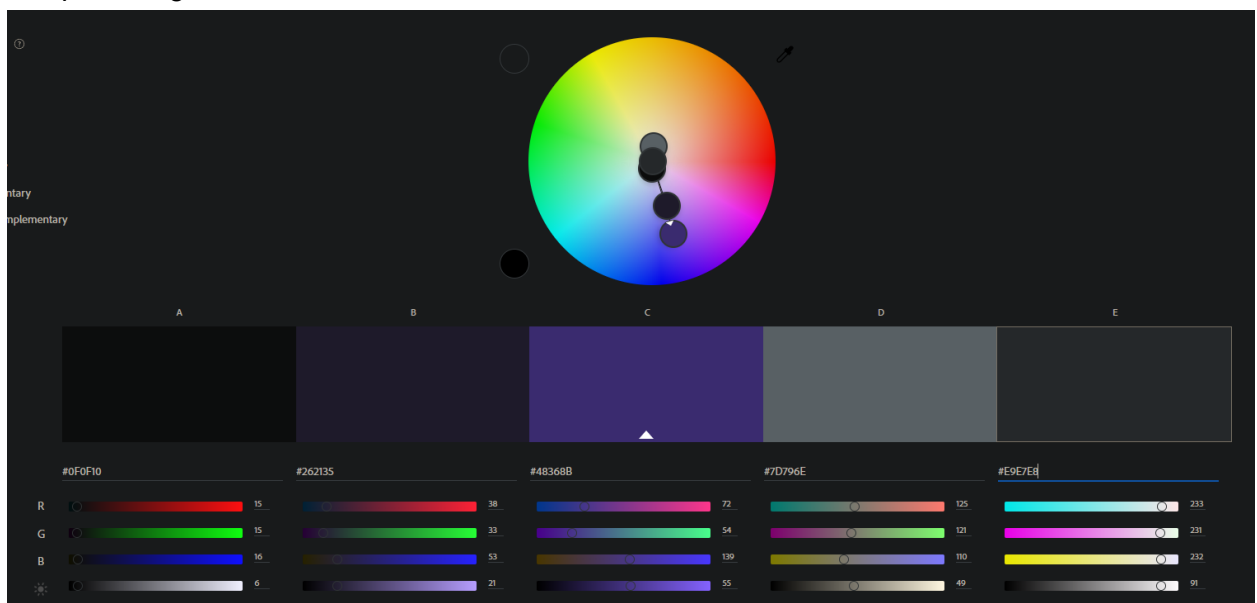

CSE472

Activity 13

1. The App that I have picked is Spotify for listening to music.

2. The primary secondary and other colors of this app:  
The pallet is given below,

Here “almost black” which is #0F0F10 is more dominant as it is the primary color.

Secondary color can be dark purple which is #262135

And other colors are given below in order:

#48368B

#7D796E

#E9E7E8

3. Based on the color relationships in the palette, I might describe this color scheme as an Analogous color scheme with a complementary accent color. The primary and secondary colors are analogous, meaning they are next to each other on the color wheel. The deep purple color acts as a complementary accent color.
4. There is very little difference compared to the Adobe colors. the general color relationships and palette harmonies remain the same. The primary and secondary colors are still analogous, and the deep purple color still acts as a complementary accent color.

There can be a little difference because of each software being different creating a little different color schemes all together so it can create a slight varieties.
